SUMMARY

Cloud-native Software Engineer and Cybersecurity practitioner. Expert in Python/JavaScript ecosystems with a focus on automating deployment processes and optimizing system usability. Bridging the gap between Development and Operations with specialized skills in Cloud Security (M365/AWS/GCP), Docker/Kubernetes, and Digital Forensics. Committed to delivering secure, scalable software solutions.

SKILLS

Programming Languages: Python, JavaScript, HTML, CSS, C, C++, PHP

Cybersecurity Tools & Platforms: Microsoft Sentinel, Defender XDR, Entra ID, Splunk, Wireshark, Firewalls (Cisco ASA), Nmap, YARA, Active Directory Security, OpenVAS, Nessus

Cloud computing platform: Google Cloud Platform, Microsoft Azure, AWS

Frontend Frameworks & libraries: ReactJS, NextJS, Tailwind, Bootstrap, MaterialUI

Backend Frameworks: Flask, NodeJS, FastAPI, Firebase, MongoDB, Laravel

Tools & Platforms: Git, Github Actions, Postman, Docker, Kubernetes, Expo

Cross-platform Mobile Frameworks: React Native

EXPERIENCE

Microsoft 365 Security Engineer

Global Brands Group (GBG) – Cairo, Egypt | January 2026 – Present

- Designed and implemented enterprise identity architecture using **Microsoft Entra ID** (Hybrid, Registered, and Joined environments), integrating **Active Directory** with **Entra Connect** to support secure hybrid cloud authentication workflows.
- Engineered device management and endpoint security policies using **Microsoft Intune (MDM/MAM)**, enabling secure **BYOD** access while enforcing **compliance policies**, encryption, and **Conditional Access** controls.
- Deployed and configured **Microsoft Defender for Endpoint (MDE)** and **Microsoft Defender for Office 365 (MDO)** to strengthen endpoint, server, and email security through attack surface reduction, sandboxing, and anti-phishing protection.
- Built centralized security monitoring and threat detection pipelines by integrating **Microsoft Sentinel** with **Defender XDR**, enabling real-time alerting, incident correlation, and security event visibility across cloud and on-prem environments.
- Implemented **Microsoft Defender for Cloud Apps (MCAS)** and **Microsoft Defender for Identity (MDI)** to secure third-party SaaS applications and detect identity-based threats across hybrid infrastructure.
- Enforced enterprise-wide data protection policies using **Microsoft Purview** for sensitivity labeling, data loss prevention (**DLP**), and information classification controls.

Nuclear Safeguards Officer (Software Developer & Analyst)

Egyptian Nuclear & Radiological Regulatory Authority (ENRRA) - Cairo, Egypt | February 2026 – May 2026

- Supported the modernization of nuclear material reporting systems with a focus on data integrity and regulatory compliance in alignment with international (IAEA) accounting standards and regulations.

- Analyzed legacy architecture to plan secure migration paths for critical accounting software, ensuring alignment with national security standards.

Co-founder & CTO

PokaMind - Stockholm, Sweden (Remote) | March 2023 – March 2026

- Developed and deployed microservice-based backend services using **Python, Docker, Firebase** and **Google Cloud Platform**, processing **5,000 API requests/day** while maintaining **99.9% uptime**.
- Led the technical team and full software development life-cycle, of a cloud-native SaaS platform, from system design through deployment, scaling the platform to support **30,000+ committed users** and securing partnerships from **5 organizations**.
- Architected a real-time audio streaming pipeline using **websockets** and **chunked processing** to transcribe speech and analyze prosody concurrently, reducing end-to-end response latency from 90+ seconds **to 8–10 seconds**.
- Reduced development life-cycle time by **75%** by leveraging **GCP and Firebase**, and engineering automated CI/CD pipelines using **Google Cloud Build, Google Cloud Run, GitHub Actions and Docker**, increasing release frequency while improving deployment reliability and rollback safety.
- Built and scaled cloud infrastructure across Google Cloud Run, Google Cloud Functions, App Engine, and Firebase, designing for high availability, horizontal scalability, and fault tolerance while supporting **2,000+ users** with **30,000+ upcoming users across 3 regions**.

Software Engineer

Spectra Pharma - Cairo, Egypt | July 2022 – March 2023

- Supervised development of pharmaceutical CRM system and mobile App, and conducted comprehensive training sessions for employees on effective use of the CRM and mobile app.

TRAINING

Blue Team Cybersecurity Bootcamp (with Cisco Packet Tracer Project)

National Telecommunication Institute - Smart Village | October 2025 – January 2026

- Architected a secure multi-site campus network in Packet Tracer using Dual-Stack (IPv4/IPv6) and OSPFv3 tunneling to bridge legacy infrastructure.
- Engineered a Defense-in-Depth strategy by deploying Cisco ASA 5506-X for DMZ segmentation, Zone-Based Firewalls (ZPF), and IOS IPS for proactive intrusion prevention.
- Hardened network infrastructure via Layer 2 security (**Port Security, DHCP Snooping**) and **AAA (TACACS+/RADIUS)**, while establishing AES-encrypted Site-to-Site **IPSec VPNs**.
- Mastered Incident Response & Threat Detection using **Splunk, Wireshark**, and **YARA** rules for malware analysis and digital forensics across Windows and Enterprise Linux environments.
- Applied Cloud Security fundamentals across **AWS**, with a specific focus on securing containerized environments and **Kubernetes** clusters.

EDUCATION

BS Computer Engineering and Software Systems

Ain Shams University | Cairo, Egypt | 2022

ADDITIONAL INFORMATION

Languages: English (Proficient), Arabic (Native)

Military Status: Exempted

Certificates: Network Security - Cisco Networking Academy Program | January 2026
